------------------------------	----

## Natural Material

---

Millions of years old, marble & onyx are some of history's more elegant creations that have embellished stately buildings since ancient times. We source our raw material from some of the world's best quarries to create two collections which provide unique characteristics to our basins:

**1) Signature Collection** – The ultra-luxurious European stones used in this collection are also some of the rarest mined in regions of Italy and Spain.

**2) Classic Collection** – This collection comprises of premium stones mined in Asian countries such as Indonesia and Iran.

---

## Artisan Craftsmanship

---

Our stone basins are produced in Bali, a spiritual destination with ancient traditions where sculpture has arguably been one of the most important forms of documenting the human experience throughout history.

At our artisanal workshops in Bali, the process of crafting each basin begins by straight-casting single blocks of natural marble or onyx. The resulting stone blocks are then hand-crafted by highly skilled artisans using primordial sculptural techniques to create truly unique wash basins, each with a distinct set of material characteristics.

A natural stone block with unique characteristics is thus transformed to create a precious object which becomes the focal point of any bathroom or powder room.

---

## Signature Collection

### **Bianco Onyx (Italy)**

This gorgeous, white onyx which is mined in Tuscany, Italy, is one of the most luminescent available, and is highly translucent. A beautiful onyx with a cloudy, contemplative mood, Bianco Onyx offers its viewer enchanting, pastel colours to calm the senses. Similar to most onyx it can be backlit to create a dramatic effect.

### **Nero Marquina Marble (Spain)**

Nero Marquina Marble is a high quality, black marble extracted from the region of Markina, in the North of Spain. Thanks to the contrast between its brilliant and intense black colour, and the luminosity of its white veins, this stone is absolutely marvellous. It has gained recognition worldwide due to its beautiful, genuine black colour.

### **Dark Emperador Marble (Spain)**

This stone is extracted in the region of Murcia, in the Southeast of Spain, and has a dark to medium brown colour with cobweb-like patterns of golden intersecting veins. These veins create a subtle three-dimensional texture, which gives the stone an intriguing depth in its appearance.

## Classic Collection

### **Travertine Marble (Indonesia)**

This Beige/Cream Marble is the most stable natural stone material that we use for our range. The softness of beige symbolizes tranquility, which is the essence of our stone products.

### **Grey Marble (Indonesia)**

Grey-Black Marble has a brilliant finish. Since grey-black marble is more challenging to find compared to beige, we strive to search good and stable grey-black stone in Indonesia.

### **Honey Onyx (Iran)**

Onyx offers a radiant and luxurious dimension to our stone assortment. This exquisite stone is characterized by warmth and incredible depth of color. This stone has a layered patterning that is translucent, luminous and very hard.

---

Slight change in texture, characteristics and color gradation is unavoidable in all natural stone material. The pictures in the catalog will not always represent the latest stone we use in production.

## STONE CHARACTERISTICS

Among the characteristics of natural stones are the presence of various veins, colors, shades, as well as micro-cracks and pin-holes. They are part of naturalness of the products, not a defect.

At the final stages of fabrication, products will go through complete procedures of control, such as mixing a color resin with residues to refine pin-holes and micro-cracks.

Since our products are artisan realizations made of natural stones, it is very likely that there are nuances of shades as well as various weight and dimension between pieces. Each piece of stone is unique and will slightly differ in look and color.

Display items are a representation of the final products and can vary in shading and veining from time to time.

The natural look of stone sourced in the previous year will slightly change the color, veins, texture and appearance. The colors illustrated on the website and/or catalogue should be used as a reference only, not as a final expectation.

### Maintenance and Care:

All products have gone through treatments that are safe for natural stones. All products are impregnated with pH balance type of chemicals for natural stone. These chemicals ensure that the stone is waterproof and anti calcareous.

Use a stone cleaner products which is ideal for the daily cleaning of natural stone surface, with the following selection guidance:

- Find solution which contains pH balance 7.0 and water based.
- Safe without harming the natural crystalline structure of the stone.
- Not contain abrasive acid (it will damage the stone structure gradually over a period of few months.)

**ATTENTION.** Avoid contacting the stone with any acidic products (i.e. liquids or cleansers). Read the labels on your cleaning products before applying on the stone. Do not use an abrasive or acetone or varnish or paint remover or detergent on the stone. Avoid regular contact with a heat source (radiator, window). Do not place the product outdoors or in direct exposure to sunlight.

## WOOD BASIN CHARACTERISTICS

For our Wooden Basin Collection, selected bamboo veneers are compressed together under high pressure and completely saturated with a special resin. The possibility of wood spikes, saturation of wood with water and other unsightly signs of wear are excluded. The extremely resistant special varnish has been tested under the hardest conditions.

### Maintenance and Care:

- All the products can be cleaned with normal cleaning agents just like all other sanitary products.
- However, it is important that no abrasive or scratching agents and cloths are used. Even if lime scale stains have built up, you can remove these with conventional bathroom cleaner.
- Toothpaste, soap and water residue is easy to remove with a wet towel without using any cleaners.
- You Should use only anti-calc products or lemon acid to clean plug.

## WARRANTY

Aquant guarantees to the original buyer/consumer that its product shall be free from defects in workmanship when used properly and normally for a period of five (5) years from the date of original purchase. The sole responsibility of Aquant under this warranty shall be limited to repair or replacement of the product. This warranty does not apply if the product has been altered or modified in any way or if it has not been used in a line with and according to the instructions published by Aquant. The warranty does not cover inflicted mechanical damage, and damage to wooden pieces or varnished surfaces caused by maltreatment.
